

Mesa's New BI Facility

Having outgrown its much smaller biological indicator locations, Mesa is expanding its presence by building a 100,000 square foot facility in Bozeman, Montana, designed to accommodate all of Mesa's biological indicator manufacturing footprint. This facility has been designed with Mesa's manufacturing process in mind and will not only accommodate rapid growth, but also the nuances of the quality system and the unique production process required for biological indicator manufacturing, storage and distribution.

Beginning April 16th, 2018, a new facility in Bozeman, MT will receive, process and result test packets. Processing in Traverse City, MI will cease the week of April 16th, 2018.

No action is required of you to accommodate this change. Your test packets sent via USPS will automatically forward to the new facility.

This relocation allows:

- Increased test processing capacity
- Reduced processing time
- More efficient reporting of test results
